

Why it is worth it for laboratories to migrate to a new LIMS

1

The decision to change your LIMS is a significant step for your laboratory. Nonetheless, you cannot ignore even the slightest irregularities in your system when it comes to market requirements, as LIMS is crucial for the competitiveness of your laboratory.

2

Replacing your LIMS is like rebuilding your car's engine while driving. Always choose a supplier who can ensure a seamless transition to a new platform without interruptions in the testing process.

3

If you already have a LIMS, it means you have already incurred considerable costs that are not always easily absorbed. Therefore, you need a LIMS that does not require additional investment until the new system is up and running.

4

The need to replace your LIMS typically arises not because you made the wrong choice initially, but because you have outgrown your current system. To avoid this in the future, it is vital to find a system that allows for uncompromising productivity, regardless of how large your operation grows in the future.

5

Competition in the laboratory diagnostics market is a never-ending technological race, so it is crucial to pay close attention to trends when searching for a replacement. You should only choose the most modern framework, such as cloud-based solutions.

6

The need to replace your LIMS goes hand in hand with your desire to expand the scope of your operation. Therefore, you need to choose a system that lowers your unit cost while expanding your capacity.

7

Insufficient attention to the User Experience and User Interface (UX/UI) of a new system, along with your laboratory staff's working habits within the old system, can lead to countless errors. Pay close attention to ease of access for all users.

8

Most modern LIMS are highly capable of handling laboratory processes. In current conditions, especially in a post-COVID world, it is critical to identify a system that possesses considerable advantages in both pre- and post-analytical phases, allowing for effective interaction with customers in the interest of the patient.

9

Your laboratory is already highly capable, having gained extensive experience in constructing the accounting system and testing rules. However, dealing with the manufacturer to update your system will likely lead to a long adaptation period and high service costs. Instead, you need to find a system that allows you to solve the majority of your problems without the help of IT specialists and consultants from the manufacturer.

10

You cannot afford to change your LIMS often. You need a team of LIMS manufacturers who have a clear vision for the future growth of their system and can give you an advantage in areas you haven't even considered yet.

If you agree with our recommendations, we suggest adding the VIVICA system to your shortlist of possible LIMS.
